

**An Important Message from
The Texas Health and Human Services Commission (HHSC)
API EVV Third-Party Software System Integration**

Background:

Application Programming Interface (API) can be used to exchange data between third-party software systems to the new EVV vendor, HHAeXchange.

Key Details:

Responsibility for the integration and performance of a third-party software system is between the program provider or financial management services agencies (FMSAs), and their third-party system. To assist program providers and FMSAs, HHAeXchange has APIs available for third-party software systems to make functionality possible.

Program providers and FMSAs can email [HHAeXchange](#) to see if their selected third-party software system has tested successfully with HHAeXchange. They may also email the [Texas Medicaid & Healthcare Partnership \(TMHP\)](#) for assistance or questions related to their third-party system.

Resources:

- To confirm system submission of EVV claims, review the [EVV Third-Party Software System Integration with HHAeXchange](#).
- The [HHAeXchange Web Service API Guide \(PDF\)](#) lists specifications to integrate a third-party software system with HHAeXchange.
- To begin the integration process, submit a ticket through the [HHAeXchange Client Support Portal](#).

For questions or help with HHAeXchange, call 833-430-1307, email [HHAeXchange](#) or visit the [HHAeXchange Texas Info Hub](#).
